330 DAYS PAST

Tuesday

36 TO COME

Pediatric Points.

An ice cap to the head and a hot water bottle to the feet is one of the best means of reducing fever. If this does not in a few hours effect the reduction it should be supplemented by cold sponging for fifteen to twenty minutes. But the intelligent management of the ice cap and the hot-water bottle are too valuable aids to be overlooked, and without sponging will accomplish much in quieting nervousness and lowering the temperature.—*Trained Nurse.*
