

Corpuscular Impoverishment

A diminution in the number of red blood cells and a retrograde alteration in their structural integrity. Such are the changes in the blood made manifest by the microscope in cases of Anemia from whatever cause.

During the administration of

Pepit-Mangan ("Gude")

the microscope evidences a progressive increase in the number, and a constant improvement in the structural character of the corpuscular elements. Especially indicated in Anemia, Chlorosis, Amenorrhea, Bright's Disease, Chorea, Dysmenorrhea, etc.

In eleven ounce bottles only; never sold in bulk.
