

**Tuesday, February 13**

44 DAYS PAST

*Thursday*

322 TO COME

**Surgical Hints.**

Next to rheumatism, tuberculosis is the most common of all affections of the joints, although in the early stage the symptoms may be so obscure as to make a diagnosis extremely difficult.

In young children caries of the mastoid process with abscess formation may occur without involvement of the inner ear, and without fever, pain or other constitutional symptoms.—
