## When Persistently Administered

in post-malarial anemia, as well as in the anemia result-  
ing from any of the severe destructive blood infections,  
**Pepto-Mangan (Gude)** builds new erythrocytes rapidly  
and certainly, and aids materially in the desired increase  
of hemoglobin. No untoward effects upon appetite, dig-  
estion, nor any of the vital functions are ever noted as  
a result of its administration.

Weather Temp.

Cold & windy  
raining to night - Eugene  
Peta's fire was over & got  
their potatoes & dug them  
all. Girls drove to school  
John ploughed all the fore  
noon or about half a day  
all together Mrs Staudling  
sent me a lot of tulip  
bulbs by the girls. Hea! is  
is making Maudie's coat. Eugene  
took the black cat home to day  
Maudie 9
