348 DAYS PAST

18 TO COME

Control of Post-Anesthetic Nausea.

Believing that nausea following anesthesia is due to the smell of the anesthetic, Lumbard has devised a simple method whereby a piece of gauze impregnated with perfume is attached to the patient's nose after the anesthetic has been administered. Lumbard claims that the method is highly efficient in preventing nausea. The selection of the perfume depends upon the likings of the patient. In the author's practice, he prefers the oil of bitter orange peel.—*Lumbard; Med. Record.*

Weather

Not very cold

Temp.

Snowed most of the day off
I am, hardly enough to
make sleighing still one
of them are using sleighs
I went to Ayler's & got
sold my poultry, went
with Billy he was here
I voted. Girls got Mariah
& had Maudie got her eye
hurt at school Billy & Mariah 5.
