276 DAYS PAST

Thursday

90 TO COME

Surgical Hints.

Every patient suffering with gonorrhoea who has a small meatus should have explained to him that the disease is likely to run a more protracted and complicated course, and should be urged to submit to a meatotomy. This can be easily done under local anesthesia, and if ordinary cleanliness be observed will not be attended with any risk of infection.—*Int. Journ. of Surg.*

Weather

Temp.

A fine day

He washed, Melba was ill
Maudie & Grace to school
John drew manure before
dinner, then after he
helped Angus & Smith
fill dilo. Jack & Birnie
was here to night
