

"Even in the Instant of Repair and Health"

(King John)

one needs assistance—convalescence from any severe illness is accelerated, and health and "well being" restored through the efficient aid of a potent general tonic.

Pepto-Mangan (Gude) materially hastens reparation and reconstruction by contributing, in readily assimilable form, the essential elements for blood and tissue repair, i. e. iron and manganese.

Pepto-Mangan (Gude) is indicated in anemia, malaria, chlorosis, amenorrhea, dysmenorrhea, rickets, Bright's disease, as a blood builder before and after operations; as a general tonic and reconstructor in convalescence from diphtheria, typhoid fever, scarlatina, la grippe, etc.

Pepto-Mangan (Gude) has gained and maintained an unique and unequalled reputation as a pleasant and efficient hematinic in such conditions. Dose:—Adults, a tablespoonful 3 times a day; children in proportion.

"Practice is to Theory What the Feet Are to the Head."—(De Girardin)

Every theoretical idea and every preconceived notion in regard to medication must, in the long run, give way to and make way for the facts that have been fully substantiated by actual clinical experience. One such fact is the undeniable superiority of **Pepto-Mangan (Gude)** as an efficient and invariably tolerable hematinic. That it "does the work" safely, quickly and pleasantly, is the consensus of opinion of the thousands of medical men who have prescribed it during the last seventeen years in anemia, chlorosis and malnutrition generally.
