To Generate and Construct

a physiologically potent vital fluid requires the necessary material for the stimulation and encouragement of hematopoiesis. Pepto-Mangan (Gude) supplies the essential material in the form of immediately absorbable, assimilable and appropriable peptones of iron and manganese, which serve to increase the hemoglobin and create new red cells.

Weather

Temp.

Rained all day

I took the girls & went for them. Mark was over this afternoon. I went early & was at Mrs M Day a little while this afternoon. The girls got a Christmas present from their Aunt. It was a pair of scissors & a silver thimble & needle case all combined. Mariah 10
