Pulse Relation to Stature.

Illustrating the well-known physiological law that the frequency of the pulse rate increases in inverse ratio to the size of the animal, a writer in a recent number of *Cosmos* (Paris) gives the following interesting conclusions in comparative physiology:

The average pulse rate was 30 pulsations per minute for elephant; 40 in the horse; 50 in the ass and mule; 70 in man; 90 in the dog; 150 to 200 in the rabbit; 670 in the mouse.

The ratio of 4 to 1 between pulse and respiration is maintained throughout.—*Jour. Nat. Med. Assn.*

Weather

Temp.

A beautiful day
has been now a little
at noon. Gene Appleford
went home this afternoon
Melba & Grace went to
by bus to night. We made
Gene dress to day.
