59 DAYS PAST

THURSDAY

307 TO COME

To Hasten Convalescence.

An appetizer, tonic and reconstructive is needed after scarlatina, diphtheria, measles, etc. Otherwise convalescence is apt to be unduly slow in the case of children whose nutrition is "below par." **Pepto-Mangan (Gude)** relieves anemic conditions, stimulates the appetite, tones the organism generally and acts as a mild but thoroughly efficient general reconstituent.

Weather

It has been

Temp.

knowing a soft snow & hail to night - it rained a little & froze. I went down to Charley Abels to see them as Lydia was buried to day. John was one of the bearers. He had an new adown invention here to day using the throat strap for an over head chug as bit - quite a new thing. I guess old Billy thought it so. John drew one load of manure & a load of bean straw I guess & try the new bit.
