93 DAYS PAST

TUESDAY

273 TO COME

An Oxygen Distributor.

A necessary molecule of the blood is iron—without iron the hemoglobin would be useless as an oxygen-carrier and could not perform its function as the distributor of the very "breath of life." In Chlorotic and Anemic conditions the need of iron is unquestioned. **Pepto-Mangan (Gude)** is distinctly preferable in palatability, eligibility and therapeutic efficiency to any other form of ferruginous material.

Weather

Temp.

A warm day but rained some & night & thundered some & is lightning a lot. Mother took Myster & Bell up to Aunt Bells this afternoon & then they came back for tea & to night. The Coverley girls came out & had tea with them & made things lively for the girls. John helped Ben - Thompson out wood ^{all day} March 5
