117 DAYS PAST

248 TO COME

The Profound Anemia

that sometimes follows the invasion of the blood by the malarial plasmode is due to the corpuscle-consuming action of the parasite. Prompt hematogenesis is distinctly indicated and Pepto-Mangan (Gude) is an ideal preparation with which to pleasantly and effectually repair the damage.

Weather

Very warm

Temp.

Took the parlor stove out
this afternoon & they finished
seeding the east field by the
east barn. Mrs W^c Leary & Maude
drove out a few minutes
Mrs W^c was in, but Maude
stayed in the rig. Gave Jess
W^c some blankets for the girls.
Made a turnover yesterday
of some. Finished my black
& white checked dress. Spruced
tree in full bloom.
