170 DAYS PAST

196 TO COME

Geriatric Aphorisms—No. 14.

The normal high point of systolic pressure can be estimated by adding the age to 100 mm. A sudden and material drop indicates decompensation or collapse.

Vomiting unless deliberately induced is rare and occurs only in serious diseases.

Perspiration unless deliberately produced or occurring in very hot temperature, is rare and indicates a grave, debilitating disease.—*Nascher; Amer. Med.*

Weather

Temp.

Rained last night & looked rainy all day, but only sprinkled a little off and on. I went to Church with Aunt Bell, Maudie's Garden & I went to night. The leaf is over! They had the decoration at the cemetery today.
