296 DAYS PAST

TUESDAY

70 TO COME

Gynecological Hints.

Menstruation is usually diminished in phthisis but increased in cardiac and hepatic disease.

Pain due to uterine disorders usually grows more severe in the course of the day.

No patient who walks about actively and with a firm step, or who throws herself into a chair and then jumps up again, is suffering from a disease of the pelvic organs.

If women with prolapsed or retroflected uterus complain of an exacerbation of their disorder, the existence of pregnancy should be suspected.—*Hellier; Practitioner.*

Weather

A lovely warm

Temp.

day has rained all day  
C Eugene & Philip Parker  
helped John draw in  
the corn shocks. Cecil  
was over & spent the  
evening. George & Revell  
was here & wanted hay  
Kella has a sore throat
