362 LAYS PAST

4 TO COME

Agalactia.

In cases where deficiency of milk is not due to anemia, tuberculosis, or other constitutional disease, faradization of the mammae for ten to twenty minutes daily is of great benefit. The current should not be strong enough to cause pain. Secretion appears within three or four days. Subcutaneous injections of pilocarpin nitrate at the same time are of great assistance.—*Medical Standard.*

Weather

Temp.

A few snow
flurries in being
cold, Eugene, Albert
& little John Mr Dunc
& Carlton & Bayel was
all here for dinner, we
had a Christmas tree &
a good time. We all
went over to Mr. Cox
to night, Evelin & Myrtle
all their families was here.
