In Devitalized Conditions,

some stimulus to hemotogenesis is required. Iron and manganese, in organic combination, are the most efficient agents with which to accomplish this purpose. **Pepto-Mangan (Gude)** is the most eligible and available of such combinations, because of its palatability, ready tolerability and absorbability, and its promptly efficient hematinic action.

*We washed the clothes
got dry. Then after dinner
we went down to the little
garden north of the woods &
planted seeds until it came
on rain. Eugene took his
buggy out to get it mended
& painted then came back
for dinner. I took the girls &
went for them with Mariah*
