Weather

Diagnosis of Pleurisy.

Temp.

X-ray studies showed that location of fluid in chest in sero-fibrinous pleurisy depends upon the position assumed most constantly by patient during acute stage, and that exudates of this type are but slightly, if at all, mobile. These facts are of assistance in differentiation of serofibrinous from other varieties of effusion.—Engelbach and Carman; Univ. Med. Journ.

Weather

Temp.

Drizzling rain all day. Maude & I went out to Aero Loannos. I burn we was home all day for the evening we all went to Mr. Leves. Joe down to sheds
