Foreign Bodies in the Nose.

A long-standing purulent discharge from one nostril occurring in a child is a pathognomonic sign of a foreign body in that situation. If the discharge is very offensive, the foreign body will be found to be porous, capable of absorbing and retaining fluids in its substance. The ordinary ozæna occurring in children invariably affects, before long, both nasal cavities.—*Clinical Memoranda, Brand & Keith.*

Weather

Temp.

W warm fine day
Mella walked to school & Pa
went for her, Aleta & Mabel
brought Billey home then
took Lydia on to Ay liver
& got her shod. Maudie
was very sick last night
& the Dr came this even-
ing & she is much better
to night. Old Mr Howe was
buried to day ~~from~~ went to
Hingsmill Daley &
Marrah 6" Billey Bright
