300 DAYS PAST

*Sunday*

66 TO COME

**Removal of Adhesive Plaster.**

To remove the plaster, raise from one-eighth to one-fourth inch. of one end of the adhesive strap before applying the ether, then, with a medicine dropper, apply ether to the skin a drop at a time, and the plaster will almost fall off by its own weight. It is necessary to be careful not to separate the cloth from the adhesive material in starting or else the ether will follow this plane, removing the cloth only.—J. Scott Brown, M. D.; Journ. A. M. A.

**Weather**

**Temp.**

Rained this morning. Maude took Auntie Peep to Al's Mr. Mrs. & Gene Appleford was here for dinner Grace is a little better & was popped up in bed a little while, Maude was in to Aunt Bells, a little while on her way home
