360 TO COME

Foreign Body in the Bronchus.

A unilateral, serious, and progressive disease in the chest, occurring in an adult, who dates the commencement of the trouble from an attack of alarming choking with some small object in the mouth, and which was thought to have been swallowed, is always due to the presence of a foreign body in the bronchus corresponding to the side affected.—*Clinical Memoranda, Brand & Keith.*

Weather

cold east wind Temp.

It began storming hard about one this afternoon, & to night it is sleet & rain. Eugene & Maudie came home for dinner. Maudie stayed. Eugene went home alone, as it was too stormy for her to take baby home, so she is staying all night again with her mother. Good wheeling
