**Nitrous Oxide in Obstetrics.**

In a report in the *Journal of the American Medical Association* it is stated that the administration of nitrous oxide during labor retards the process very little, if at all, it does not produce muscular relaxation beyond that of normal sleep. Its action is rapid and transitory, not irritating or unpleasant to inhale, gives relief from pain and accelerates labor without disastrous results. There is no predisposition to post-partum hemorrhage and involution is not delayed.

**Weather**

**Temp.**

A dull day rained  
Pa & Maudie went to Aylmer  
in the morning to get  
Polly's neck lanced, &  
brought old Marciah  
home with them home  
Auro was here all day  
Leevil was over & pumped  
up his wheel.
