11 DAYS PAST

355 TO COME

Nov. 21, 1906.

Dr. S. Williams, Mexico City, Mexico, says:

"I received the bottle of **Pepto-Mangan (Gude)** which I employed in doses of two drams in half a glass of milk, three times a day, in the case of my little son eight years old. He was pale, thin, with colorless lips, very little appetite. In two weeks I found a rapid improvement, and at the end of one month I think he was completely recovered."

Very cold, girls drove to school
John walked to Ay-liner & got
his sleigh to, to cold for the men
to work in the woods, only to
chores
