170 DAYS PAST

TUESDAY

196 TO COME

Geriatric Aphorisms—No. 14.

The normal high point of systolic pressure can be estimated by adding the age to 100 mm. A sudden and material drop indicates decompensation or collapse.

Vomiting unless deliberately induced is rare and occurs only in serious diseases.

Perspiration unless deliberately produced or occurring in very hot temperature, is rare and indicates a grave, debilitating disease.—*Nascher; Amer. Med.*

Weather

A fine day

Temp.

I went to Ayler's & took
Maude Thompson with me
went and registered.
I got Mariah shod on her
front feet. Had a swarm
of bees but they went
back. John has been cutting
hickies all day since he
took the milk.
