206 DAYS PAST

159 TO COME

Test for Bile Pigment in Blood and Urine.

The reagent is ether containing 0.5 per cent. of iodine. To 5 c.cm. of urine 1 c.cm. of the reagent is added and the mixture shaken thoroughly. On standing, two layers form, an upper brownish, ethereal one and the lower urinary one. The latter is colored green if bile be present. If now the ethereal layer be poured off and the urine shaken up several times with fresh ether, so as to remove the excess of iodine, the green color becomes still more marked.—Pakuscher and Gutmann; *Med. Klinik.*

Weather

Temp.

Rather a fine day
rained a little but not
much. Girls went to church
then home, then back to
Sunday School. We all went
to night - Auntys all.
Eugene & Carl took washer
this evening. Cycling road
home from Sunday school
with the girls

Maribel 15 - Billy 5
