132 DAYS PAST

233 TO COME

The Care of Surgical Patients—No. 4.

The condition of emaciated patients—particularly gastric cases with obstruction at the pylorus—can often be greatly improved in the course of a few days by increasing the body fluids; e.g. a quart of saline solution administered per rectum night and morning. All patients with suspected gastric lesions involving retention of food should have the stomach thoroughly washed the morning of the operation.—Balfour; Mayo Clinic. Med. Record.

Warm
 Girls & I took the buggy
 out & got it mended &
 brought it home to
 night. Mr. Miller's came to
 night & took us around by
 Ayler's for a drive. I
 painted the summer
 kitchen today. Maudie was
 there in the morning for science
 then came home
 Mariah 10 Billy & 2 with me

Davis gave the buggy to Billy
