260 DAYS PAST

106 TO COME

Empyema Thoracis.

To discriminate between a purulent and serous fluid is often impossible, though there are many signs which favor the presence of pus rather than serum. It is frequently thought that a hectic temperature is indicative of pus, but I find as high temperatures recorded in my serous as in my purulent cases. When an effusion occurs in a child under three, the probability is strongly in favor of its being purulent, as also when it occurs subsequent to an attack of pneumonia, scarlet fever, or other infectious disease.—H. G. M. Dunlop; *Edinburgh Medical Journal*.

Weather

Temp.

Cold but did not  
freeze last night  
Girls & I went down  
to Mrs Arthur Leaverleys  
& got some water mullin  
Mrs Coy & Coelhin was  
over to night, John &  
Maude have gone to  
Aylmer, Eugene & Alta was  
her for dinner & took their horse in
