Wound Dressings. No. 1.

Unless wounds are suppurating very freely, as a general proposition they are dressed too often.

Peroxide of hydrogen injected into cavities and sinuses often carries the injection further into uninvaded tissues. Peroxide is also too strong to apply to newly healed tissue.

Sterilized gauze without dusting powder is sufficient protection for any clean surgical wound.—Dr. L. Sexton; Va. Med. Semi-Monthly.

Weather

Rained some

Temp.

Maudie & Grace went to school
Melba & I went to the Dr
with my hand it was
all gathered in one of our
knees, I went down to
Boyles & got some ointment
& sent Mrs Bingham
flower box with Gay
