344 DAYS PAST

21 TO COME

Treatment of Erysipelas.

Dr. Aspinwall Judd, of New York, recommends carbolic acid as being almost a specific in erysipelas. A strong solution is painted on the surface until it whitens, and then followed by swabbing with alcohol. The treatment should go an inch beyond the border of the eruption to destroy all germs. The unbearable itching, burning and throbbing are relieved at once, fever declines and the general symptoms are relieved.
