326 DAYS PAST

39 TO COME

**A Handy Test Tube Flame.**

When the physician happens to run short of alcohol for his spirit lamp, and desires to heat or boil urine or other liquid in a test tube, it will be found that an ordinary five or seven and a half grain tablet of hexamethylenanim (urotropin-formin), placed upon a dish or slab, and lighted, will burn slowly, with a blue flame, sufficiently long to accomplish the purpose desired.
