III DAYS PAST

Sunday

255 TO COME

The Distributor of Life.

The necessary molecule of the blood is iron—without iron the hemoglobin would be useless as an oxygen-carrier and could not perform its function as the distributor of the very "breath of life." In Chlorotic and Anemic conditions the need of iron is unquestioned. **Pepto-Mangan (Gude)** is distinctly preferable in palatability, eligibility and therapeutic efficiency to any other form of ferruginous material.

Weather

Rained but Temp.

*The girls & I went to church
& to night - Mauchie took bus
but, as Milla was not well
& me stayed home, cleared
off this afternoon.*

Special to
