309 DAYS PAST

56 TO COME

Extreme Prostration With Severe Anemia.

A physician in Ireland writes as follows: "I tried **Pepto-Mangan (Gude)** in a case of extreme prostration with severe anemia. The patient was vomiting all except the lightest articles of diet. For such cases I think your preparation supplies a much felt want, and the rapid recovery of my patient was certainly pleasing. The sickness abated and disappeared in a few days, and afterwards recovery was rapid."
