232 DAYS PAST

134 TO COME

**Fractures about the Elbow.**

These cases should be started on an internal right angular splint. At the second or third dressing, while the fragments are still plastic and when the swelling has subsided, the wrist should be slung from the neck, obtaining the most acute flexion possible without too much pain. The flexion is increased at subsequent dressings for two or three weeks, when it is decreased again until all dressings are abandoned at the end of four or five weeks.—Allen.

**Weather** Very cold in morn. **Temp.** and warmer during day. Mother and I went to town in the morning. Mother went to town in afternoon after some dress goods for me. I taught the girls their music lessons. Father helped Cecil Coughell. Cecil fixed my wheel. Went down to Mrs. Thompsons after honey to - night.
