177 TO COME

Oligochromemia

is the term used to denote a reduction of the normal percentage of hemoglobin in the individual red cells and is a characteristic feature of Chlorosis. Pepto-Mangan (Gude), because of its promptly available iron and manganese, is a creator of vital hemoglobin and, because of its non-irritant character, and ready tolerability, is peculiarly efficient in the treatment of Chlorosis and Chlor-Anemia.

Weather

Temp.

Rather cold
Most of the day. We was all home all day but John he was down to Ed Thompsons this afternoon Mr Roy was over this morning & helped us to cut a swarm of bees out of the bitter root tree. Mr Roy, Mrs Roy & Coelise sat over to night. All as chickens are all got to nineteen Plymouth Rocks
