**Passive Movements in Elbow Injuries.**

Failure to recognize the pernicious effects of early passive movements in elbow injuries leads to continued inflammation of the joint and protracted stiffness from increased adhesions and callus formation, and may result in a severe degree of permanent disability later. Passive exercises may be usefully employed when the range of movement is increasing.—Shenton; *The Lancet*.

**Weather**

**Temp.**

It was very cold. A raw wind.  
mother took me to school.

Papa went to Eugene. I came  
home with Aunt Bell.  
Mariah sprained her  
leg. Maud, mother & Hattie  
went out town this  
evening to get Maud's tooth  
fixed. They drove Polly.

Mariah 5, Polly. 17 miles
