

to hear what Mr. Hart from Toronto had to say about forming a Norfolk Cooperative Association for buying farm supplies and marketing farm produce. It looks as if it would be organized alright. I came home at five o'clock in what was really the 3 o'clock car. There was a bad storm on at noon and it was cold, so that the cars were all late but it had quieted down a bit by the afternoon. We had a concert to night piano & horn.

Sunday January 20th

I walked down to Church this morning and Aunty walked back with me to dinner, this afternoon I went back down town soon after dinner, spent the afternoon over at Mrs. M. Queen's with Mary and had tea at Aunty's. Hubby was there to tea also. Aunty and I went to church after tea, church being held in the Sunday school both services, and Mary and I walked home with Aunty and spent the evening laughing at Hubby's stories. Hubby had his dog down there and she mad as if she would eat Mary up when she first came in that tickled Hubby to see her show some spirit. Mr. James, Elsie & Brant, Gladys, and Lily were all over here this afternoon and Dad drove them all home before tea in the tub-sleigh. It has been a lovely day & fine night. Clear & frosty but sunny & not much wind.

Monday January 21th

Frank and I went down to the Short Course to-day and had a good day but no special speakers. Dad, Evah and the baby drove down this afternoon to post a couple of letters for Tom but didn't stay. Hubby came over to tea to-night and brought over a couple of pairs of army boots one pair that Quint had left & one pair that Jackson from Turkey Point who has been discharged, had given him. The principal object of his visit was to tell Dad that Stinger the gas-man was down to-day and wants to make arrangements to leave his farm and to drill for gas right away. Sunny & Cold.

Tuesday January 22nd

Frank and I have been at school all day. Mrs. Kydd, formerly of Sincal and now in the Government employ was here all day lecturing us on fruit-growing and was interesting and well trained. The Domestic Science Course started to-day and Neff said there were about fifty women up there this afternoon. To-night I went down to see Mary and see if I could arrange to go to Sincal for a spate but she thought we had better put it off till next week. It has not been quite so cold to-day.
