

“In Union Is Strength”

The truth of this old adage is well exemplified in therapeutics by the especially favorable results obtained from the conjoined administration of arsenic, strychnia and

Pepto-Mangan (“Gude”)

The combination acts promptly and vigorously as a general supportive tonic in markedly devitalized conditions such as Grippe, Prostration, Convalescence from severe Pneumonia, prolonged Typhoid, Surgical Shock, etc.

Both arsenic and strychnia are thoroughly compatible and readily miscible with PEPTO-MANGAN (GUDE), and either or both may be safely added in any desired proportion, according to age and indication.

In 11 oz. bottles only.

Never sold in bulk.
