286 DAYS PAST

79 TO COME

Iodine in Corneal Ulcer.

Ganilla treats all cases of ulcers and ulcerations of the cornea with iodine, irrespective of the cause. The eyes having been previously anesthetized with a few drops of 4 per cent. solution of cocaine, the end of an ordinary wooden applicator is sharpened to a pin's point and a little cotton wool firmly wound round it. The point is dipped in tincture of iodine and the surface of the ulcer gently touched with it. The conjunctival sac is next thoroughly irrigated with distilled water.—*Brit. Med. Journ.*
