208 DAYS PAST

68 TO COME

Tachycardia.

T. C. Janeway says where great tachycardia sets in acutely, in cases of well-compensated mitral disease, the tachycardia can be controlled by digitalis within forty-eight hours, with complete relief of symptoms. Even under long-continued digitalis medication such patients may maintain a fair working ability for years. Treatment must be instituted before marked dilatation of the right heart and general venous stasis have occurred.—*Arch. Int. Med.*

Weather

Temp.

Sprinkled in the morning but cleared off considerable. Melba went to town, and Mrs. Bingham went also. Mother went after cider, and went to Kingsmill too. Pa plowed. Mother finished quilt. Little kittens have had a great day for pleasure. Got letter from Mary Arnold.
