

Blood Poverty

means a diminution of the number of the fundamental red corpuscles; a reduced percentage of oxygen-carrying hemoglobin, and a diminished resisting power against more serious disease.

Pepto-Mangan ("Gude")

supplies these deficiencies. It furnishes organic iron and manganese to the blood elements, increases the hemoglobin, and restores to the blood its normal germicidal potency. Pepto-Mangan (Gude) literally "builds blood" in cases of Anemia, Chlorosis, Amenorrhea, Rickets, Bright's Disease, etc. Samples and literature on request.

In eleven ounce bottles only; never sold in bulk.
