137 DAYS PAST

228 TO COME

Antitoxin Therapy

in addition to the profound diphtheritic poisoning due to severe Klebs-Loeffler infection, is more than likely to induce a secondary anemia, which requires early and efficient hematogenetic medication. Pepto-Mangan (Gude) is especially adapted for administration to children, because of its distinct palatability, ready tolerability and prompt absorbability.

Weather

Temp.

Wet. Turned the calves out yesterday & the colts yearling. Aunt Bell & I went to blunder John & was down to shed this afternoon & took shed two new records, that he bought in London, set a hen under the maple tree. Melba Gaud's Carlin, drove to Sunday school. Eugene went away this afternoon & stayed to tea. Mr. C. Thompson was yesterday to Covington to his brother in laws funeral. Coming home to on road.
