320 DAYS PAST

46 TO COME

Progressive Deafness.

Grodenigo finds a rational basis for the administration of calcium salts as a therapeutic measure, as the deafness of pregnancy and lactation is the result of changes in the thyroid and parathyroids. He employed about three grains of the chloride or lactate of calcium in daily doses, with excellent results. As the hypodermic method frequently leads to abscess formation, it is considered dangerous.—*Presse Otol.*

Weather

Very Cold

Temp.

I took the girls & John
went for them, John
went down to Leary
Went to a reform meeting
Eugene was here to
night. Al^t came
as far as her home
Carlton was very ill
