93 TO COME

Thursday, September 30

273 DAYS PAST

92 TO COME

The Necessary Molecule

of the blood is iron—without iron the hemoglobin would be useless as an oxygen-carrier and could not perform its function as the distributor of the very "breath of life." In Chlorotic and Anemic conditions the need of iron is unquestioned. **Pepto-Mangan (Gude)** is distinctly preferable in palatability, eligibility and therapeutic efficiency to any other form of ferruginous material.

Weather

Temp.

A fine day but the children
much colder by night. I finished
cleaning the up stairs. Viola had
no school on account of the teachers
convention. So she did the other
work. Maude drove alone & took
Viola & Leam. John & Joe finished
the corn cutting this forenoon
John helped Mark cut corn this
afternoon for a little while & is
over there again to night.
Sent the stones in their places
Yesterday sent the pipes on them
day had a fire in the dining room for the first
