223 DAYS PAST

SATURDAY

143 TO COME

May 19, 1906.

Dr. Schneider, Blankenhain in Thg., Germany, says:

"I would state that your Pepto-Mangan (Gude) was employed in a series of cases of anemia and chlorosis, with good results. The preparation is well tolerated, causes no gastric disturbances, and owing to its pleasant taste, is willingly taken, especially by children."

A fine day for Young was here
all day. They finished cutting
the wheat & filling the driven
barn with hay. Maudie went to
Albion with George & Mrs. Davis
this morning. Then when she came
home went down to the candles
for his honey extractor & the
girls have extracted a
condense can of honey & a
bowl full. He sent Arthur
McKinnah some flowers & honey.
