38 DAYS PAST

328 TO COME

Geriatric Aphorisms—No. 5.

Snoring in sleep is of no consequence; groaning indicates cerebral hyperemia or other pathological condition. Talking in sleep, if unusual, is generally a muttering delirium.

Mouth temperature is always one or two degrees lower than rectal temperature and it may vary two degrees at different times of the day in health and more in disease.—*Nascher; Amer. Med.*

Weather

Cold & wind

Temp.

blowing all day and snow
flying so you could hardly
see the east barn, but no
snow, only blowing. Maudie took
Gullax stayed all day with
Mrs. Olive. John churned
& shed was up all the morning
until noon came for our
milk.
