50 DAYS PAST

316 TO COME

Management of Surgical Cases—No. 2.

Rectal cases need mild cathartics and sitz baths until entirely healed, and longer.

Prostatic cases often require bladder washing from time to time as indicated by the condition of the urine.

Patients who after operation have more or less stiffness of muscles or joints should receive massage or Faradism persistently until completely relieved.—Leigh; *Int. Journ. of Surg.*
