Friday, February 18

49 DAYS PAST

317 TO COME

The Prospective Mother,

if at all anemic, requires special attention during the period of gestation, in order that she may be thoroughly prepared for parturition and lactation. Pepto-Mangan (Gude) is so thoroughly palatable and agreeable, and so easily tolerable, that the most fastidious prospective mother takes it readily and with marked benefit.

Weather

Temp.

Snowed a considerably
& blustery. Clarence & Cecil took
a grit for John & he & Mella
went with them. Mr Mitchell
called this morning to see Maudie
& Mrs Mitchell sent her a lovely
lot of carnations. Mr Day was
and so was Cecil. Maudie
was better all day, but not so
well to night. John got his
bottle of oil this morning.
I am waiting for the Dr
