

Erythrogenetic Hemoglobinogenetic

TWO LONG WORDS—

but amply justified when applied to the
therapeutic properties of

Pepto-Mangan ("Gude")

This standard preparation of iron and
manganese, in organic combination, un-
questionably

1. Creates new red cells.
2. Rebuilds those partially destroyed.
3. Increases the hemoglobin percentage
in Anemia, Chlorosis, and other
forms of Blood Devitalization.

In 11 oz. bottles only.
Never in bulk.
