258 DAYS PAST

108 TO COME

To Toughen the Nipples.

The best application to toughen the nipples previous to confinement is the glycerite of tannin. This is readily made extemporaneously, in any physician's office, by heating glycerin and stirring in tannic acid till the mixture has the consistency of thick syrup. It is better prepared in a tin box, as it is difficult to mix properly in a bottle. This is applied, by rubbing in thoroly, pulling and kneading gently at the nipple, for ten minutes night and morning, for two months previous to confinement—*Med World.*

Weather

Sunday

Temp.

A fine day. Grandpa
of I was over to see Lewis
to night. John has
gone down to the sheds
we got ready to go to
Church but one of the
heifers ran away so
we had to stay home
