18 DAYS PAST

348 TO COME

The Heart in Syphilis—No. 2.

The signs and symptoms are those of cardiac disorder, and little or nothing, except the history, general aspects and the Wassermann reaction, may indicate the true etiology.

Treatment should be first along indicated circulatory lines, secondary as to time, but, most productive and important of all, it must be specific.

Good results, cures in many instances, will follow appropriate antisiphilitic treatment.—Harlow Brooks; *Am. J. Med. Sc.*

Weather

Very cold

Temp.

I took the girls & went for them. Maudie was sick & Mrs. Collins is in bed when I went for them. I got the Dr. & took him there, but I brought her home. I have been with her all night, giving her medicine.
