309 TO COME

Diagnostic Pitfalls (Continued)

"Unresolved pneumonia" is frequently a mistaken diagnosis, the real disease being interlobar empyema.

"Malaria" is often given as the diagnosis in cases of phthisis, hepatic syphilis, hepatic abscess and urinary infections.

"Typhoid fever" in a patient's history may mean tuberculosis or latent sepsis (septic endocarditis, suppurative nephritis, etc.).—Cabot; J. A. M. A.

Weather

Cold

Temp.

Took the girls to school & brought Aunty Maud home with me. For dinner she stamped some towels. Ada Boyde was here for dinner. Then they went down to ~~the~~ ^{the} mill. Baker & the London Jeweller was here after dinner. The girls had home from school with Mrs Best, Thompson & took Aunty Maud home
